HONEYCOMB GLASS

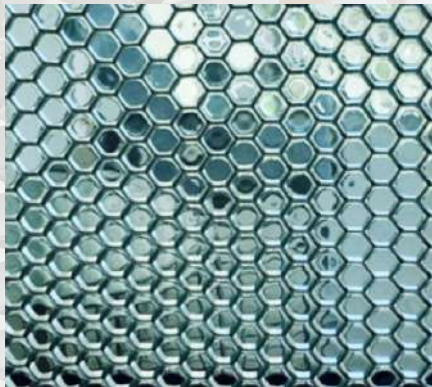

Manipulating light and space, Honeycomb Glass provides varying levels of translucence & privacy, in a unique insulated glass format (IGU/DGU). Suitable for interior and exterior applications, Honeycomb Glass is ideal for wall partitions, sloped & over-head glazing, and back-lit applications.

Available in a maximum size of 70 x 145" (1,778mm x 3,683mm), Honeycomb Glass is available in transparent, translucent and lens-ray formats. In transparent format, directional sight lines, day-lighting and privacy is easily achieved by adjusting the orientation of the glazing panel. In translucent and lens-ray formats, Honeycomb Glass is ideal to diffuse light and provide shading or privacy.

Honeycomb Glass is available with tinted glass, printed graphics, and colored interlayer. In Frosted and Lens-Ray formats, dramatic optical and backlit effects are easily achieved. Honeycomb Glass provides considerable sound dampening and has being installed in a variety of hospitality and daylighting projects.
